# Are You Wearing The Wrong Pants?

---

It's both an art and a science, good dressing. I want you to wear what makes you happy. But we are so trained to think that what's trendy is what looks good. Not always...just because it's trendy does not mean it's right for you.

Take skinny jeans. You'd think the only thing Americans know how to wear are skinny jeans. There is so much more out there!

# Straight, Skinny & Bootcut

When it comes to choosing the **cut** of your pants or jeans, there are a few things to consider: the rise, the length and the shape of the legs. We're focusing on the shape.

From left to right, above:

**Straight** The leg opening & knee are the same width.

**Skinny** The leg opening is narrower than the knee.

**Bootcut** The leg opening is wider than the knee.

# Straight

The key to wearing **straight** pants is this: they must hit at the mid point of your ankle bone, or just graze the top of your ankles.

# Skinny/Slim

The key to wearing **skinny or slim** cut pants/jeans is the same as straight: they must hit at the mid point of your ankle bone, or just graze the top of your ankles or boots. No puddling!

# Bootcut

The key to wearing **bootcut** pants/jeans is that they must be narrow through the hips and thighs, and slightly flare out from the knees down. The more petite/short you are, less of a flare is best.
